

TeknaPlus

Steam and suction with Power Jet

The compact and attractive design, the pleasant sensation of soft touch, technological 3D colours are distinctive elements of Tekna, the new cleaning machine that offers our partners extensive customisation and a state-of-the-art solution to achieve maximum results with minimum effort.

TECHNICAL DATA

Suction: **2400 MM**
Motor power: **1200 WATT**
Dimensions: **37 x 30 x 41 CM**
Steam pressure: **4,5 BAR**

Boiler power: **1900 WATT**
Boiler volume: **0,8 L**
Refilling system: **AUTOMATIC**
Steam ready: **3 MIN**

Water tank for steam: **1 L**
Detergent tank: **0,5 L**
Water filter capacity: **5,5 L**
Power jet enriched steam: **YES**

The entire range is exclusively made in Italy, in full respect of EC directives, with Italian components, to ensure maximum reliability, efficiency and durability.

Genuine Made in Italy.

TeknaPlus

it vacuums,
washes,
dries,
sanitise
and irons

Performs the functions of 5 appliances:
it vacuums,
washes,
dries,
sanitises
and irons.

It is a special, powerful and ecological machine, it doesn't need any filters or bags that have to be changed every so often, it uses the natural properties of water to ensure maximum hygiene and cleaning.

As it is small, it can be manoeuvred easily and can be kept anywhere.

Tekna is the solution you are looking for.

AIR CLEANING CYCLE

1_Suction

Unhealthy air and dust are sucked up and conveyed inside the machine.

2_First filtering

Unhealthy air is subjected to a first filtering using water.

3_Filtering with separator

A second filtering operation is then carried out by the exclusive "molecular separator" that manages to intercept and reject even the smallest particles.

4_Output of clean air

These two natural filters expel healthy, clean and perfumed air.

PLUS SYSTEM

Power jet/Enriched steam

This feature increases the efficiency of steam and dirt removal. A special pressure pump injects liquid at the same time as steam is released. You can use ordinary water or, if necessary, a special diluted detergent.

Automatic refilling

A high-pressure pump injects water directly into the boiler while always keeping the level constant when using steam. You can refill the tank even when the machine is switched on without losing time.

Steam lance adapter

Extensions

Tank filling bottle

Handle with hose

150-mm opening

Multifunction brush

Wiper

it vacuums,
 washes,
 dries,
 sanitises
 and irons

STEAM GENERATION

The boiler is one of the main components of the machine, steam is created inside it. Limescale is the boiler's main enemy, Maxima uses technology designed to help reduce the risk of clogging and malfunction.

1. Limescale removal injector for automatic refilling

2. Stainless Steel

3. Resistance

Extendable hose

Electric carpet cleaner

Iron

Streaming turbobrush

Transparent nozzle

Turbo carpet cleaner

Degreaser
